

## **Consortium for Radiologic Imaging Studies of Polycystic Kidney Disease (CRISP) Data Archive**

The Consortium for Radiologic Imaging Studies of Polycystic Kidney Disease (CRISP) was established to develop and implement studies to test whether imaging techniques can provide accurate and reproducible markers of progression of renal disease in patients with polycystic kidney disease. Autosomal-dominant polycystic kidney disease (ADPKD) is characterized by gradual renal enlargement and cyst growth prior to loss of renal function; however, standard radiographic imaging has not provided the resolution and accuracy necessary to detect small changes in renal volume or to reliably measure renal cyst volumes. The CRISP cohort study longitudinally observed ADPKD individuals using high-resolution magnetic resonance (MR) imaging to determine if change in renal and cyst volumes can be detected over a short period of time, and if they correlate with decline in renal function early in disease.

The CRISP data archive contains data through the CRISP 3 cycle, as well as allele frequency data.

The NIDDK Central Repository offers the following three data packages from the CRISP1 study:

1. The standard data archive, which contains a dataset compiled by the Data Center, Center for Research on Health Care at the University of Pittsburgh. The original study protocol and other descriptive documentation and the study forms are also provided in the standard data archive for reference.
2. The raw data archive, which contains the original raw data collected by the study, analysis files associated with study publications, and reports of the analyses performed by statisticians and quality control specialists at the Repository to ensure the completeness and accuracy of the analysis datasets in the Repository.
3. The genetic data archive, which contains raw and summary data collected in an ancillary study analyzing mutation-based molecular diagnostics of autosomal dominant polycystic kidney disease (ADPKD) in the CRISP population.

The NIDDK Central Repository recommends that only the standard data archive be used and it is included in the CRISP package. Requestors must ask for the genetics and/or raw data archives separately from the standard data archive.

Archive files are organized into the following directories:

- Data
- Documents
- Dataset Integrity Check (DSIC)
- Forms

The Data, Documents, and Forms directories are further organized into the following subdirectories:

- CRISP Allele (for Data folder only)

- CRISP1
- CRISP2
- CRISP3

## **Data**

The CRISP Data directory contains the following files and datasets in Windows-based SAS and CSV formats, with corresponding codebooks.

### Data\CRISP Allele

- crisp\_ids\_genetic\_data.xlsx
- CRISP\_IDS\_GENETIC\_DATA.CSV
- crisp\_ids\_genetic\_data.sas7bdat

### Data\CRISP1

- CRISP1\_DataDictionary\_Alpha\_April2009.xls – This document serves as the data dictionary for the updated CRISP I analytic dataset (repository090408.sas7bdat). It also defines missing data codes and includes definitions for all derived variables.
- REPOSITORY090408.CSV
- repository090408.sas7bdat – This dataset was compiled by the Data Center, Center for Research on Health Care at the University of Pittsburgh.
